a The inversion is the only differentiated region on chr2
collinear control
inversion 60.54–79.50 Mb
median F_{ST}
inversion 0.396 · collinear 0.014
F_{ST} (AA vs BB)
chr2 position (Mb)
b The inverted arrangement is the MORE diverse one — it was formerly commoner
d_{xy} (AA, BB)
π_{BB} inverted, derived
π_{AA} ancestral
$\pi_I/\pi_S = 1.356 \pm 0.048$
equilibrium at $p = 0.374$ predicts 0.597
$d_{xy}/\pi_I = 1.385 \pm 0.021$
diversity ($\times 10^{-3}$)
chr2 position (Mb)
c left breakpoint — 60.54 Mb
a step, not a ramp
F_{ST}
chr2 position (Mb)
d right breakpoint — 79.50 Mb
a step, not a ramp
chr2 position (Mb)
