

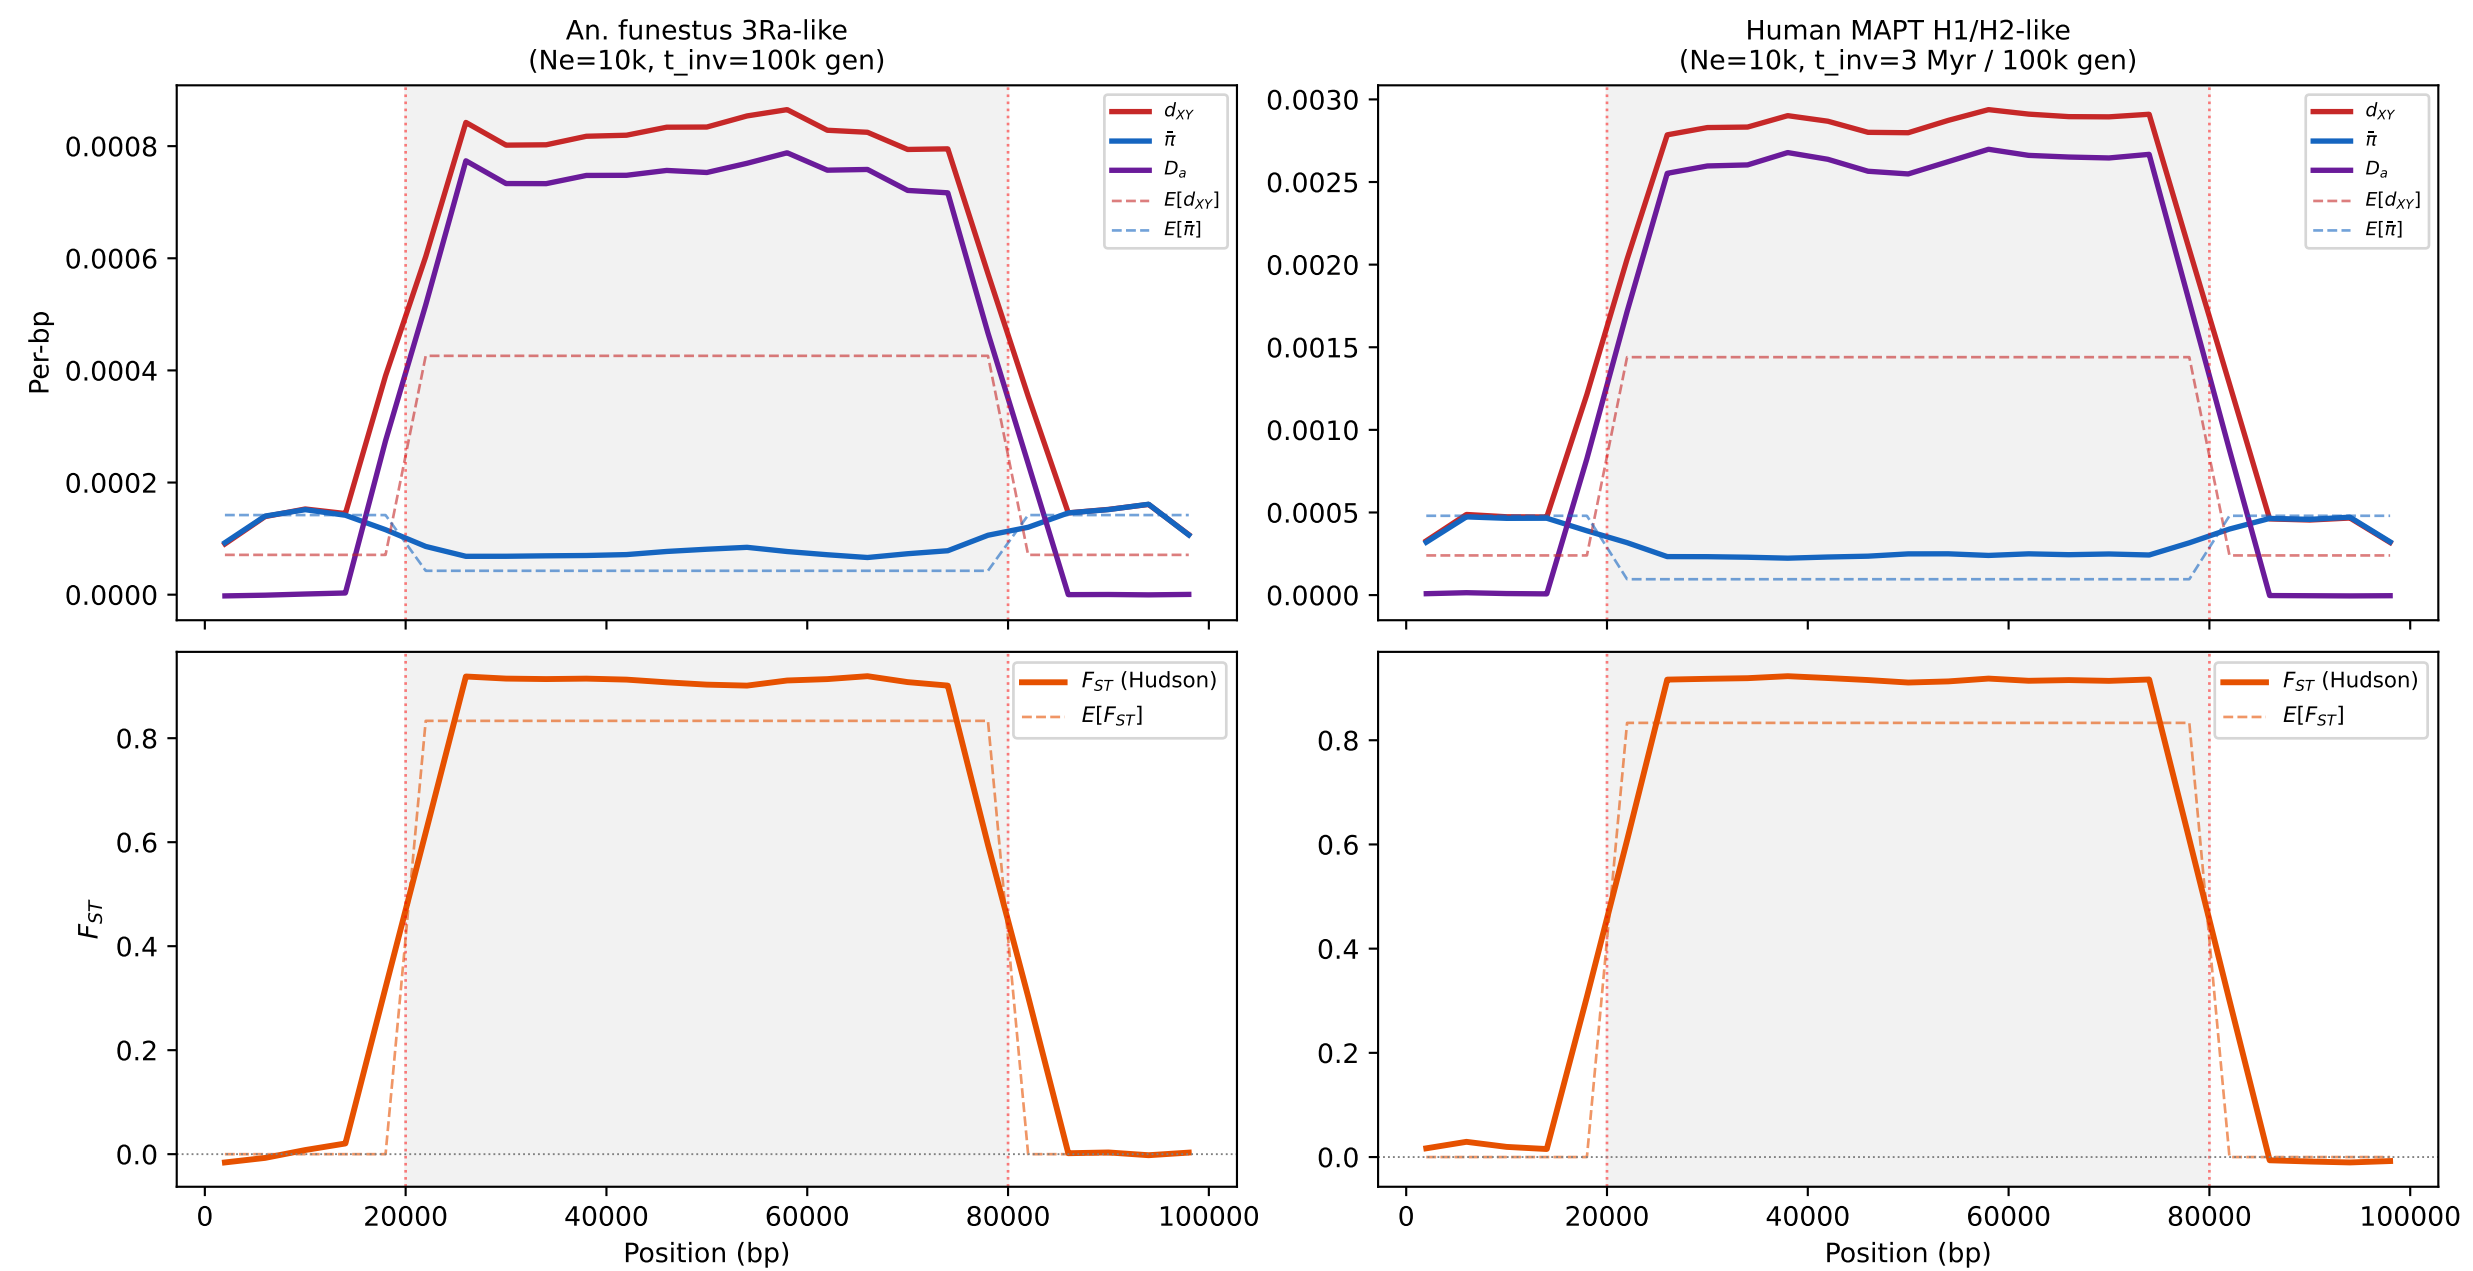

Figure 3. *msinv* reproduces divergence patterns of real chromosomal inversions. Left: *An. funestus* 3Ra-like ($N_e=10,000$, $\mu=3.55e-9$, $t_{inv}=100,000$ gen, $p_{inv}=0.3$). Right: Human MAPT H1/H2-like ($N_e=10,000$, $\mu=1.2e-8$, $t_{inv}=100,000$ gen, $p_{inv}=0.2$). Top: d_{xy} , π , D_a . Bottom: Hudson F_{ST} . Dashed: structured coalescent predictions. Parameters: $L=100$ kb, $r=1e-8$, $\gamma=1e-9$, 80 reps per scenario. Command: `pixi run -e all python examples/make_figures.py`
